One generated source, two parallel branches

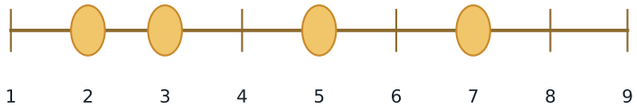

Same Gaussian source and operation algebra upstream; arithmetic and physical interfaces are parallel conclusions

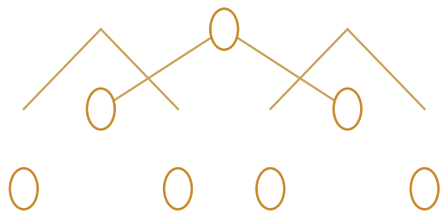

JOINT PUBLIC CLOSURE
CommonFoundation.generated · CanonicalClosedWorld.generated

MATHEMATICAL BRANCH

MathematicalInterface.generated
ArithmeticFoundation

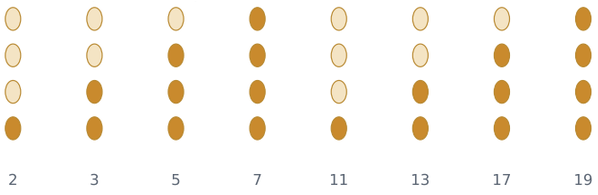

natural numbers · ordered expressions

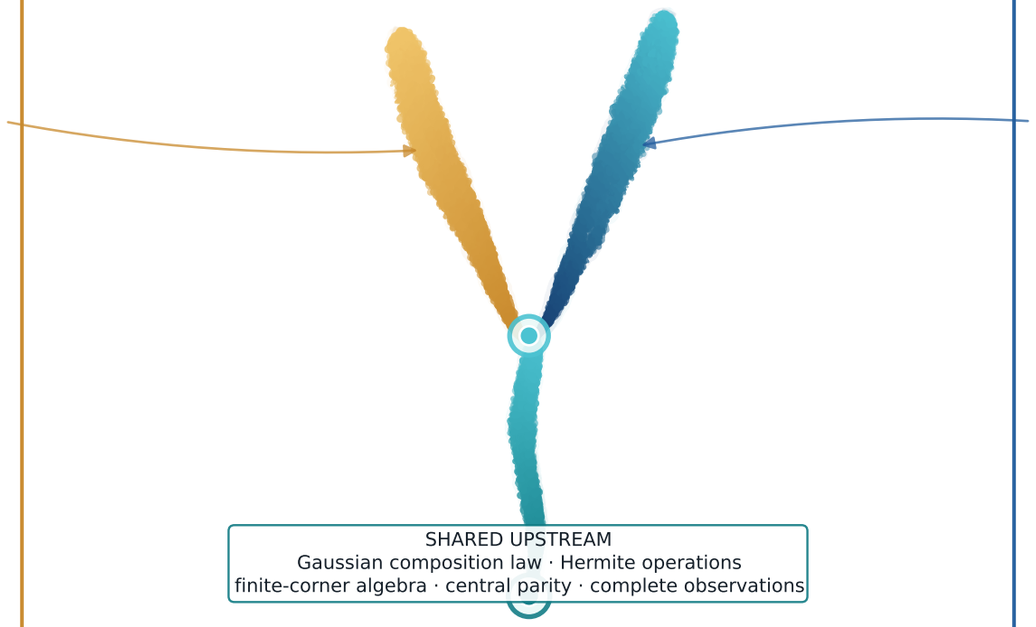

complete ordered histories

prime occupation · Möbius–Gaussian readout

discrete arithmetic structure, not spacetime

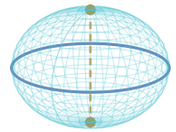

SHARED UPSTREAM
Gaussian composition law · Hermite operations
finite-corner algebra · central parity · complete observations

PHYSICAL BRANCH

PhysicalInterface
SourcePhysicalInterface.generatedCore

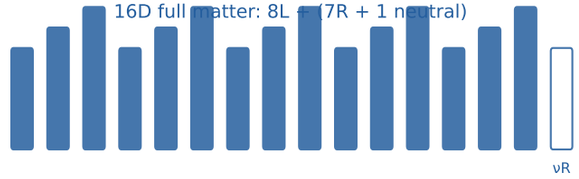

SU(3) × SU(2) × U(1) / Z6

RP³ = S³ / Z₂

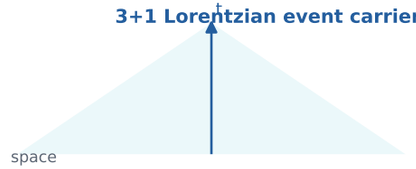

compact internal 3-geometry

16D full matter: 8L + (7R + 1 neutral)

15D charged quotient

3+1 Lorentzian event carrier

MINIMAL CHANGE
Source.CanonicalRoot.generated → Source.CommonSource.generated

Schematic of Lean dependency direction, not a geometric embedding or a claim of equal carrier dimensions. The arithmetic entry imports no module in Physical; shared proofs remain upstream.
